Flange Dredge Hose

Introduction

Flange dredge hose has been supplied for the offshore dredging industry with high quality and reasonable price. The applications for dredging rubber hose are estuary clearance, beach construction or large land reclamation and other engineering projects for port, dock, seawater, silt, sand, discharge flood etc. We are in the position to build flexible hose with flange end ranging from 10 inch ID to 52 inch ID. And the available length is up to 11.8 m. Suction and discharge dredging hose with flange can be selected as requirements.

Construction

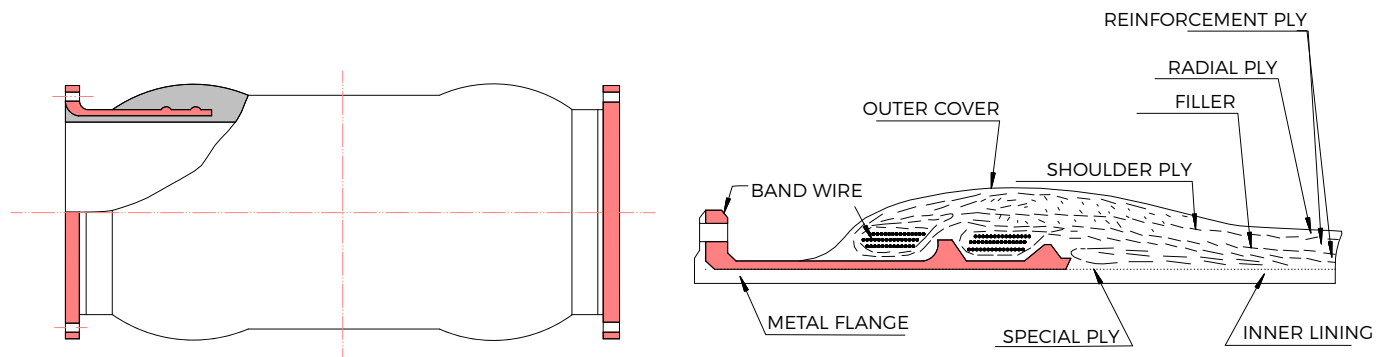

Inner Tube: Natural Rubber.

Reinforcement: Steel spiral wire and high tensile fiber reinforced.

Cover rubber layer: wear-resistant SBR for cut and abrasion resistance, or a tough neoprene for salt-water service with added resistance to ozone and sunlight.

Application: The flange discharge hoses are used for silt / gravels conveyance with Dredgers.

Structure Of Flange Dredging Hose
